EDUCATION

Carnegie Mellon University, Pittsburgh, PA
Master of Science, Computational Design - Expected May 2028
Merit-based Scholarship
Sogang University, Seoul, South Korea
Bachelor of Art and Science, Art & Technology; Bachelor of Science, Convergence Software - February 2025 (Cum Laude)
Relevant coursework: Computer Graphics, Design and Analysis of Algorithms, Introduction to Computer System

SKILLS

Languages: TypeScript, JavaScript, Python, Java, C++, GLSL, HTML, CSS
Frameworks & Tools: React, Next.js, React Native, SCSS/Sass, TailwindCSS, FastAPI, Three.js, React Three Fiber, WebGL, WebXR, PyTorch, Git, GitHub, Figma

WORK EXPERIENCE

Front-End Developer (Contract), Samsung Electronics
Samsung Design Membership
June 2025 - August 2025; June 2026 - August 2026

- Developed Samsung Design Membership MEP websites in collaboration with designers, translating visual concepts into responsive web applications.
- Built 14 reusable Figma and code components across nine bilingual project pages, creating a shared publishing workflow that maintained consistency between design and implementation.
- Implemented Three.js interactions and a parameter panel that allowed designers to independently configure visual behavior; tested functionality and performance across desktop and mobile devices.

3D Web Front-End Engineer, Engineering 6
April 2025 - December 2025

- Developed 14 interactive, web-based 3D science modules for MiraeN, a major South Korean textbook publisher, deployed on its M-Teacher XR Science Museum platform for the revised elementary school science curriculum (grades 5–6).
- Built real-time 3D simulations and interactive experiments using Three.js, React Three Fiber, WebGL, and GLSL, enabling students to explore scientific concepts through direct interaction.
- Collaborated with curriculum developers to translate textbook concepts into browser-based learning experiences, implementing user controls and physics-based interactions.

Product Manager Intern, Naver Connect Foundation
May 2023 - September 2023

- Developed UX writing guidelines and designed wireframes for the SEF2023 online conference website and coordinated its live streaming integration, serving more than 205,000 visitors across four live sessions.
- Collaborated with designers and developers to resolve an image-saving limitation in KakaoTalk's iOS in-app browser, identifying a long-press workaround and communicating it to users through UX copy.

PROJECT EXPERIENCE

Individual Project, TypoFold
A Tool for Converting Code-Art based 3D Typography into Papercraft
September 2024 - Present

- Built a web-based creative tool using Three.js and WebGL, enabling users to transform 2D typography into editable 3D models and printable papercraft templates.
- Implemented real-time 3D editing and a geometry-processing pipeline connecting digital interaction with physical fabrication.
- Iterated on the tool through a 27-participant preference study and three hands-on workshops; received the HCI Korea 2025 Creative Award.
